Introduction

Jet Set Vets is an NGO that provides veterinary services for parks and nature reserves in various locations on the continent of Africa. This proposal will show the design and development of the front end of a world-wide desktop recruitment application used by Jet Set Vets. The intent is to appeal to potential candidates who would want to gain experience from veterinary work safaris during specific timed intervals called seasons. Included in this plan will be personas, use cases, content plans and prototypes, along with some discussion on potential user accessibility features and user experience cognitive psychology techniques for building websites.

Personas

Although there were two rudimentary personas for the users of the app, it was deemed that it would be helpful to give the personas more depth in order to better understand the users' accessibility needs in the development of the use cases.

Meet Dr. Madeleine Nicholson, who is the HR Recruitment Administrator. She is the main focus for the use cases due to her high-use frequency of the app and her accessibility challenges.

Dr. Nicolson became a veterinarian because her dream was to work with giraffes. Since she developed Carpel Tunnel Syndrome towards the end of her practice, she decided to be part of Jet Set Vets so she could continue her dream work with the giraffes in Africa.

Dr. Madeleine Nicholson, DVM

About	Personality
Age: 70	Patience: High
Work: HR Recruitment Administrator	Fear: Low
Family: Married	Growth: High
Character: Focused, attentive	Adaptability: High
Location: Nairobi, Kenya	Persistence: High
Education: University	Time Management: High
Computer Skills: Advanced	Networking: High
Computer Type: Laptop, Desktop	Online: Moderate
Background: Semi-Retired Veterinarian	Social Media: Moderate

Goals	Frustrations
To provide the parks with reliable vets	Finding enough professionals to staff the parks
Find easier ways to access her web applications	Difficulty using her hands for long periods

Meet Escobar Viajar, who is the Business Promotion Administrator. He is the secondary focus as he is working to reach potential recruits from all over the world.

Escobar has worked all over the world promoting different businesses and schools. He decided to join Jet Set Vets so he could be a part of the conservation efforts to protect animals.

Escobar Viajar, MBA

About	Personality
Age: 35	Patience: High
Work: Business Promotion Administrator	Fear: Low
Family: Married	Growth: High
Character: Creative, resourceful	Adaptability: High
Location: Nairobi, Kenya	Persistence: High
Education: University	Time Management: High
Computer Skills: Advanced	Networking: High
Computer Type: Laptop, Desktop, Mobile	Online: High
Background: Retired Veterinarian	Social Media: High

Goals	Frustrations
To build more connections for Jet Set Vets	Reaching potential recruits around the world
To utilize the tourism industry to bring in more veterinary professionals	Getting people to understand how tourism protects the conservation reserves

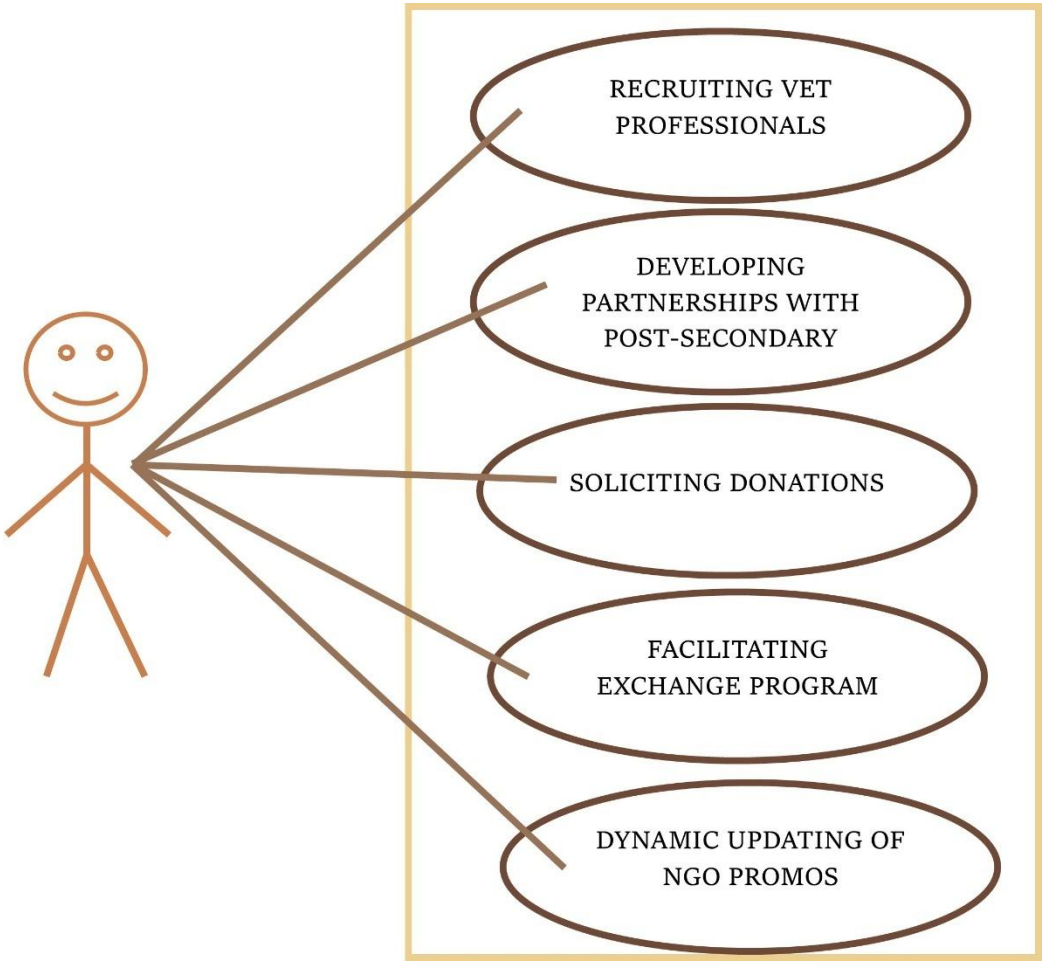
Part I – Use Cases

There were ten possible use cases that had a high possibility of being features of the Jet Set Vets desktop website.

1. Tutorials
    a. How to register/login
    b. How to navigate the website
    c. How the donations and funding are being allocated
    d. How the work safaris and the seasons operate
2. Work Safari page which updates every 1 to 3 months to advertise current and upcoming work safari seasons
3. Work Safari Recruitment and Exchange Program
    a. Veterinary professionals can see the jobs, including their descriptions, salaries, and locations
    b. Jet Set Vets administrators can see the list of potential candidates who want to apply for a work safari
4. Parks and Reserves page to show which ones are exclusively partnered with Jet Set Vets
5. Housing Options
    a. Locations near or in parks/reserves during work safaris
    b. Locations outside of the parks/reserves during downtime between safaris
6. Donations
    a. From institutions
    b. From private donors
7. Education Partnership page to show the post-secondary institutions that offer work safaris to graduates, with a link for others to see how to join
8. Calendar and booking page to schedule video and audio interviews, follow-up meetings, and for tracking interviews, travel dates, work schedule

9. Message system and notifications for communication between recruiters and candidates
10. Contact page for user inquiries and/or technical difficulties

These possible use cases lead to the following use case diagram:



From the use case list and diagram, the following use case was chosen to develop into a prototype:

USE CASE NAME	TUTORIALS	
BRIEF DESCRIPTION	Work Safaris Page	
ACTORS	Veterinary professionals	
NORMAL FLOW OF EVENTS	Actor	System
	1. The new user can browse through the types work safaris they want to be recruited to based on park/reserve or season	
	2. The user selects a work safari	3. System checks if they are logged in
		4. If not, the system will then prompt user to login
		5. If user is logged in, the website takes them to the Application Process page
		6a. The system will display the work safari they chose

		6b. The system will give them two options to apply for the work safari
	7. The user will choose one of the application options.	8. The user will be taken to the page with steps on how to apply with the option they chose.
	9. The user will follow the instructions to submit the work safari application	10. The system will put the user into the recruitment queue to be accepted or denied by Jet Set Vets Recruitment Team
		11. The system will then lead them to the user's account dashboard page
	12. The user logs out to end session	

Part II – Content Plans

Content plans were designed to keep simplicity and accessibility in mind for intuitive interaction.

Jet Set Vets Work Safaris Landing Page

1. Header
    a. Name of page – “Work Safaris” landing page
    b. Jet Set Vets Logo
    c. Login
        i. My Account
            1. Notifications
            2. Messages
            3. Settings/Preferences
            4. User contact and location information
            5. User Credentials
            6. Billing
            7. Legal
2. Navigation Bar
    a. Home
    b. Tutorials
    c. Exchange Program
        i. Find parks/reserves offering exchange positions
    d. Contact Us
        i. Customer Support
        ii. Troubleshooting
    e. Donate
        i. Private Donors
        ii. Business Donors

        iii. Educational Institution Donors

3. Main Content – the user can choose their work safari by location or date
    a. Parks and Reserves Work Safari
    b. Our Upcoming Safari Seasons
    c. Current Work Safari Seasons
4. Learn more about conservation

<u>Jet Set Vets Application Process Page</u>

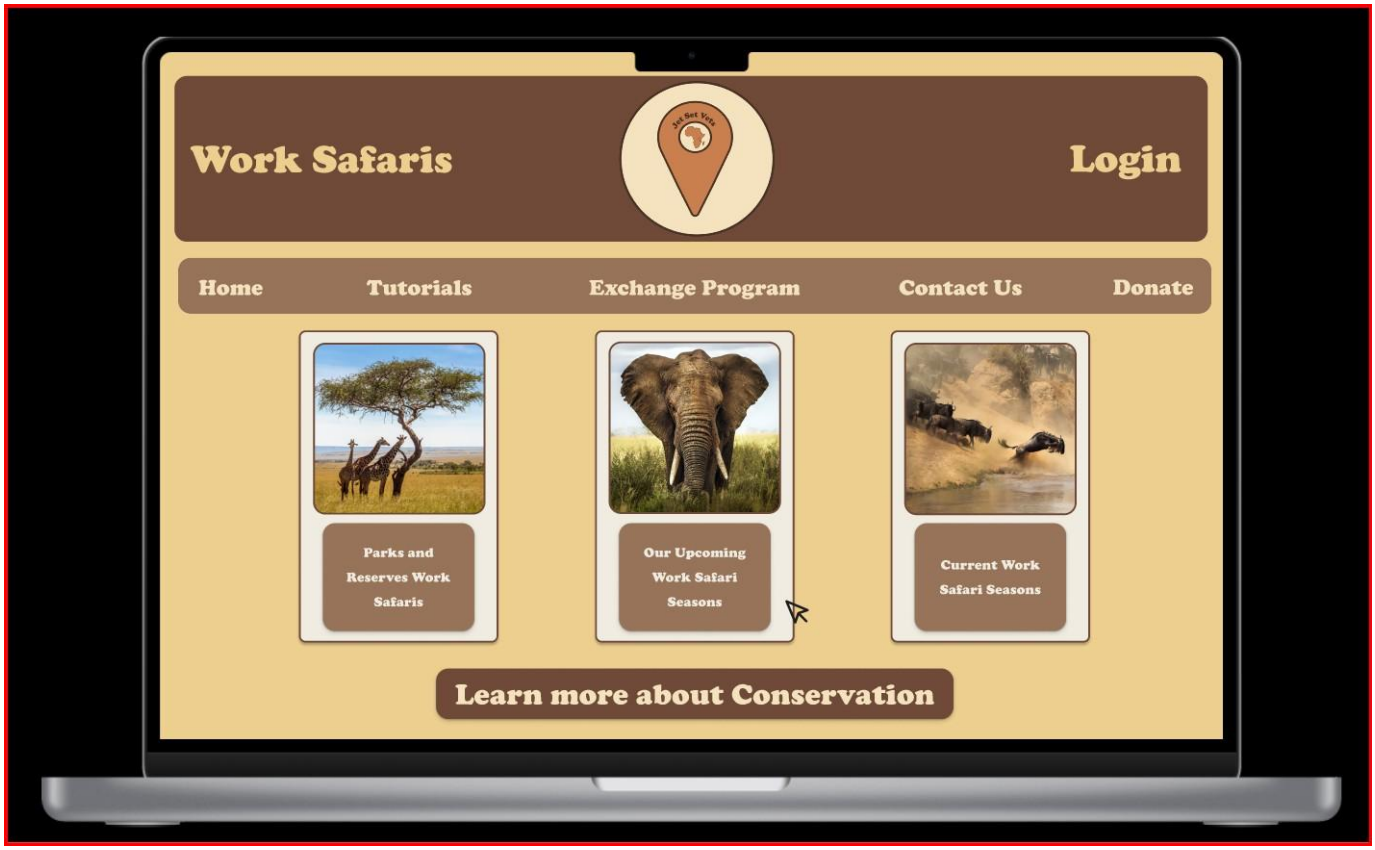
1. Header
    a. Name of page – "Application Process" landing page
    b. Jet Set Vets Logo
    c. Login– shows a user logged in
        i. User profile photo
        ii. My Account
            1. Notifications
            2. Messages
            3. Settings/Preferences
            4. User contact and location information
            5. User Credentials
            6. Billing
            7. Legal
        iii. Logout
2. Navigation Bar
    a. Home
    b. Housing
        i. Places to live in the parks/reserves while on work safari
        ii. Places to live outside the parks/reserves while on work safari
    c. Exchange Program

        i. Find parks/reserves offering exchange positions
    d. Contact Us
        i. Customer Support
        ii. Troubleshooting
    e. Donate
        i. Private Donors
        ii. Business Donors
        iii. Educational Institution Donors
3. Main Content
    a. Shows details of what work safari they chose
        i. Choose a Different Work Safari
    b. First time? Click Here to Apply
    c. Been on Safari before? Click Here to Quick Apply
4. Check Application Status

Part III - Prototypes

The prototypes developed for Jet Set Vets are based on the veterinary professional choosing and applying for the work safari they would like to experience.

Figma Prototype One: Work Safaris Landing Page



Figma Prototype Two: Application Process Landing Page

Part IV – Accessibility, WCAG 2.0 and AODA

While creating these Figma prototypes with our accessibility persona Dr. Madeleine Nicholson in mind, it was decided to keep the size and distance of clickable items on the larger side. This was to give her the ability to click on a more general area on the input buttons and still achieve the same response as any other user. Putting more space between the clickables also accommodates some of the issues she may have with her fine-motor skills due to her Carpel Tunnel Syndrome. The pages were also kept fairly simple and straightforward to prevent any accidental clicks on other links. After consulting the "Keyboard Compatibility in Web Accessibility Perspectives Videos: Explore the Impact and Benefits for Everyone" by WC3 Web Accessibility Initiative, three other accessibility things that could be added in the future are voice commands, extended time limits, and auto-save. Voice commands would provide better accessibility for Dr. Nicholson by adding in the option to simply say the name of the link she would like to access, followed by saying, "Enter" to confirm. As for the other two, extended time limits and auto-save, they would give her more time to fill out forms without the concern that she could lose her progress.

Part V – User Experience, Interaction Design and Cognitive Psychology

For user interaction and interaction design, two of Dr. Susan Weinschenk's science-based cognitive psychology principles were incorporated in the prototypes. The first one, "People Don't Want to Work or Think More Than They Have To", was kept top of mind when designing the prototypes (Weinschenk, 2010, para. 7). The prototypes were made to be simple for that very purpose so the user can navigate the page and easily find what they are looking for. With that kind of ease, it is more enjoyable for the user to want to return and interact with the website again. The second principle, "People Make Mistakes", was important in why there was a lot of space on the page and links were kept fairly far apart from each other (Weinschenk, 2010, para. 20). The spaciousness on the page reduces the chances of clicking on links by accident. People enjoy when they have a successful experience when interacting with websites, which also encourages them to return to interact again. With the intention to have potential recruits returning for work safaris regularly, these principles help foster a positive user experience with the Jet Set Vets application.

Conclusion:

In summary, after developing the personas, use cases, content plans, prototypes and accessibility features, the Jet Set Vets desktop application, and its uncomplicated interface, would be a beneficial tool for recruiting veterinary professionals. It is an effective new way to give skilled veterinary professionals the opportunity to be a part of the conservation efforts for Africa's plethora of exotic wild animals.
